DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-63, drawn to a pixel cell or imager, classified in class 257, subclass 292.
- II. Claims 64-72, drawn to a method of operating a pixel cell or imager, classified in class 250, subclass 208.1.

The inventions are distinct, each from the other because of the following reasons:

- 2. Inventions of Group I and Group II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the operation can be carried out on two separate photo-conversion devices that are not part of a pixel cell or an imager.
- 3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
- 4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
